## CMPE 101-Intermediate Programming Quiz-03

### Question 01 (50p)

Write a **do - while** loop that prints following numbers:

2 4 6 8 10 12 14 16 18 20 22 24

### Question 02 (50p)

Re-write following **if-else** statements with the **switch-case** statement again.

```
int m ; // suppose, we get the value of m from standard input...
int n;
if (m == 100) {
    n=10;
}
else if (m == 200) {
    n=20;
}
else if (m == 300) {
    n=30;
}

else if (m == 400) {
    n=40;
}
else {
    n=-10;
}
```

## Bonus Question (25p)

Write a method that takes two integer numbers as parameters and returns sum of all **even** numbers between those two numbers.
