

# CMPE 101 - Intermediate Programming

## Worksheet(Week-12C)

### Part I

In this part your assistant teaches you how to write Java application with Eclipse IDE.

### Part II

In this part you will implement some simple application with Eclipse your self.

- Create a parent class first (for example, **Book**), then create a child class (for example, **Programming**). To to this, use Eclipse and complete some methods (constructors, getters and setters) automatically.
- Write a Test class and test your classes with creating different objects.
