CMPE 101 - Intermediate Programming

Worksheet(Week-12B)

Part I

In this part your assistant teaches you how to write Java application with Eclipse IDE.

Part II

In this part you will implement some simple application with Eclipse your self.

- Create a parent class first (for example, **Person**), then create a child class (for example, **Student**). To to this, use Eclipse and complete some methods (constructors, getters and setters) automatically.

- Write a Test class and test your classes with creating different objects.
